- Supports Cameras with NTSC Video Format
- Possible to add up to two additional cameras to the display*
- 2 Year Warranty

**Note:- If adding more than one camera a switch will be required. (Switches not included)*

Overview

Holden, Chevrolet & GMC 4WD's are very popular tow vehicles and are commonly used to tow large caravans. They also come with large factory screens so it makes sense to integrate a caravan camera into that existing screen and avoid mounting additional displays on the dash.

This system includes a Plug & Play Interface with advanced video sensing and switching system that automatically switches to the caravan camera image when the caravan is connected to the vehicle and reverse gear is engaged. Once the caravan is disconnected from the vehicle the system returns to normal and will display the factory reverse camera.

You can even view the caravan camera image while driving forwards without affecting the sound from the factory audio system. This means you can comfortably see what's happening behind you right on your existing factory display.

Compatibility

Compatible with the following GM Vehicles with 8 inch Screen & Factory Navigation:

- Holden Colorado from 2016
- Holden Trailblazer from 2016
- Chevrolet Silverado from 2015
- GMC Sierra/Denali from 2015
