- Activation while driving forwards with a long press of the NAV button.
- Only compatible with NTSC cameras.
- 2 Year Warranty.

*except if adding a Front Camera (switches not included)

Overview

Toyota Landcruisers have always been a popular car for towing large Caravans and Boats. But when you tow something large it blocks what you can usually see in your rear view mirror. A popular solution to this is to mount a camera on the back of the caravan or trailer which can usually be viewed on a separate/secondary screen.

However, many new models are now coming with existing large High Resolution screens as standard equipment. This product allows that existing screen to be used to display the caravan camera image while driving forwards and without effecting the current audio playing. The system is Plug and Play and you simply long press the "NAV" button on the vehicles audio system and the screen switches to display the camera picture.

Compatibility

Compatible with the following Vehicles:

- Landcruiser 200 Series Sahara with 9 Inch Screen and Surround View Camera System (from August 2018)
- Landcruiser 200 Series VX with 9 Inch Screen and Surround View Camera System (from August 2018)

Notes

- If you have a VX or Sahara model (built before August 2018) that has the 9 Inch Screen, please see part number [1259](#).
- Only compatible with cameras that run NTSC video signal. If you have a camera existing on your caravan/trailer, please check it is NTSC before ordering.
